Almost one-twentieth of the poppies. tion of the United States is w dowed

With the additions recently an nounced the number of memoers of the British House of Lords it 572.

Wheat, cotton, iron and many other things which are produced in vast quantities in the United States are at wonderfully low figures.

That Americans have a "sweet toot," is shown to the New York Mail and Express by the fact that they consume 25,000 tons of candy a year.

There is a boy in Sing Sing (N. Y.) Prison who was sent up for six years and a haif, for stealing \$1.50. It has just been discovered that he did not steal it, and there is talk of his demanding an indemnity from the State.

Cities in Norway do not grow quite so rapidly as some of those in the West, muses the New York Tribune. Tromso, in that country, has just celebrated its 100 th anniversary. In that time it has grown from sixty people to 6000! The inhabitants are chiefly devoted to fishing.

It looks to the New Orleans Picayune as though every country in the world would be added to the list of sugar producers and refiners. A number of Japanese merchants representing large capital propose starting a joint stock concern, and establishing works for refining between Hioro and Osaka and also near Yokohama; ad it is said have already taken steps to import the necessary machinery.

Of all cities of the world, Paris presents a gathering of humankind most fearfully mixed in its elements of disorder. The criminal brought up from childhood in the capital will risk his life for the privilege of living there. Accordingly, many criminals who have been forbidden residences in Paris, in spite of the strictest surveillance of the barriers, will work their way in again and take up their career of crime under other names.

Three streets in Paris are to be named after the authors, Edmond About, Guy de Maupassant and Octave Feuillet. Taine, the critic and historian; Brillat-Savarin, the epicure; Charcot, the great physician, and Fourier, the socialist philosopher, whose communistic colony in New Jersey half a century ago was a more interesting experiment, the Chicago Record thinks, than even the Brook Farm-all these are to have their names perpetuated in the new baptism of streets that is taking place in Paris,

A Bengalese magistrate, having been informed of the whereabouts of a mad dog, armed himself and went to the place where the rabid animal lay by a house door. He learned upon inquiry that two women were in the h use and sent word to them that he was about to shoot the dog and therefore they should not be alarmed by the report, and that, as he might not inflict a fatal wound at the first fire, and, in fact, might miss, they should remain within until notified. Such a supreme courtesy is in marked contrast with that of western civilization.

While Russia is behindhand in most things pertaining to progress and enlightenment, she is distinctly in advance of the remainder of the world as far as the regulation of the the bicycle traffic is concerned. Before any one is permitted to ride on any public thoroughfare he is compelled to obtain a license at a cost of a dollar, and to have his name and address entered upon the police registers of his district, in token whereof he is presented with a square piece of leather with his number in large figures of bright metal. This he must have permanently affixed to the back of the cycle, so that it may be seen by the police. But, prior to receiving the license, the knight of the wheel is forced to undergo au examination as to whether he can ride sufficiently well to avoid becoming a public danger. This examination consists in the descript on of a figure 8 set round two sticks, and he is obliged to do this to the satisfaction of the official examiners, one of whom is usually the president or vice-president of the local bicycle

It is said every once in awhile by wrinkled, cross and repulsive people that kissing promotes disease But who is afraid of catching a germ from a 16-year-old girl wearing a white dress and a blue sash?

Essex County Herald. THOSE LITTLE BILLS CONDENSED NEWS OF THE DAY.

Are not at all likely to pass now.

Genuine Surprises Sprung in the Senate.

This week will probably see the close of the second session of the 53d Congress. The Senate has formally declared there should be no further tariff legislation at this session, by adopting Senator Murphy's resolution to that affect, the vote standing 27 to 16. A great surprise was the resolution introduced by Mr. Gray, instructing the Committee Finance to report back a sugar bill with a flat revenue duty. Mr Manderson introduced an amendment, instructing the committee to re-port the free sugar bill, with an amendment re-enacting the bounty provisions of 1890 A long descussion followed on the question of fividing this proposition, Mr. Lindsay demanding the division, and after half an hour of talk the vice-president decided that the vote should be taken directly on the amendneut. The bounty amendment was carried 21 to 20. This vote, however, showed that the senate was without a quorum, and so it was not fina. About the only thing that keeps senators here is the tariff, and the general impression now is that the president will permit it to become law just as soon a the treasury officials are really to carry it into It is likely that the somate will meet for a short time daily, and then adjo-pending the reception of the tariff balt. the mean time there will be an effort to pas-the house bill to repeal all laws author-izing a relate of the internal rev-ence tax on alcohol used in the arts. there is nothing much for the house to do apparently, but to wait for the action of the stands any show of getting through, thers, and the

MIDNIGHT MURDER.

Burglars Commit a Double Crime at Haverhill, Mass.

Jacob Crosby, a tarmer living near Haver-hill, Mass, was suddenly aroused about midnight by a noice at the front door of his house, caused by three men who demanded admittance. Mr. Crosby and his wife quickv dressed themselves and left the house the rear door in search of assistance. Mrs. Crosby started for the house of Edward Crosby, a brother of her husband, and Mr. Crosby went in the opposite direction. Mrs. Crosby aroused her brother-in-law, and he started in baste and unarmed for his brother's house, where he arrived before Jaco Crosby returned. On reaching the house h found that the men who caused the disturb-ence had gained an entrance ransacked some of the rooms, and were about to Edward tried to remonstrate with the men and prevent their departure. In a scuffle which followed a shot was fired, the bullet lodging in Edward's body, causing instant death. The men were masked, and it is thought that the leader of the gang was a man who had some ill will against Jacob Crosby. Frank Little, who is suspected to be one of three burglars who are alleged to have been the murderers, has en arrested and lodged in jall at Manches H. Another suspect surrendered the Newburyport police, and another till named Hunt is made a prisoner at

WAS NEAR THE POLL But the Wellman Expedition Had to Turn Back.

Waiter Weliman, with the crew of the crushed steamer Ragnvald Jari, has arrived at Tromsoe, Nor., by the fishing yacht Berntine Capt. Johnson, from North Splizbergen, in discussing the failure of his expedition, said The expedition reached within a few miles of the S1st parallel on May 12, 11 days from oe The whole Northeast explored. The scientific he party made many party teresting observations in geology and natural history. Among the points ad-ded to the map by virtue of the discoveries made during this survey are capes Gresham, Whitney, Armour and Scott and Walsh Is-

On July 1, with seven men and an alnminium boat, I started to force my way north but I was compelled, after several days of rightful struggle with the ice, to give up the ttempt. On July 4, I started to return to Waiden Island, crossing Dove Bay. We were all compelled to wade through water waist high for hours. Wellman declares that he will make another attempt in 1896 to reach

SUGAR TRUST GOES UP. Its Case May Be Taken to Full Bench

The Sugar Trust has appealed to a higher ibunal. It has filed in the Supreme Court clerk's office its appeal from the decree en-tered July 19 last, under the approval of Judge Barker ordering it to stop doing business in Massachusetts until it has illed its oveted certificate of its financial condition n March 1 last. The trust, whose legal title is the American Sugar Refinery pany, had thirty days within which to form-ally signify its intention to appeal from this decree by entering an appeal, and just as the month of grace expired the appeal paper was put into the clerk s hands. The effect of the appeal is to put the case in a way of being taken up to the full bench of the Supreme Court for a survey of the law questions involved. It is said that one side claims that junction to prevent the confinuance of the defendant's but mess until the required certidone of the act of the year of 1891 is unaffeeted by the appeal, while the contrary view is held by the counsel for the other

BLOWN TO ATOMS.

road Accident. A freight train on the New York Central railroad, consisting of 63 cars, half of which were oil tanks, broke in two at Cheektowaga. N. Y., about a mile from Buffalo. The two parts of the train collided with great force. and one of the oil cars exploped, the oil The other oil cars caught fire in rapid necession, and there was a series of tremen-ous explosions. One tank was blown fully 1000 feel and over a house, which caught fire and was destroyed. Theodore J. Snyder, a brakeman, was fearfully burned about the Some were vertiable dynamite shells, heavy pieces of their iron being hurled fully a quarer of a mile. The Government have promised that the Evicted Tenants' bill shall run its course concurrently with the Welsh Disestablishment bill. This promise Welsh Disestablishment bill. This promise loss not satisfy some of the Welsh members and they are out once more with their threats of dire vengeance in case the ers do not come up more promptly to the Weish demands

South Carolina Dispensary Law Get

Judge Aldrich of South Carolina has filled is decision in the case of the state, ex-rel, jeorge and Holly vs. the city council of Aiken, S. C. The document contains 3000 words. He decides the dispensary get in its main features unconstitutional. Begarding the writ of prohibition asked for by the dis-generary authorities, enjoining the council from interfering with the dispensary. Jares that under its charter the city authority to grant licenses to dealers in any Mayor Chatee will apply for an in

James Harrington, the alleged Bosto counterfeiter, who was arrested recently in Woonsocket, R. I., escaped from Deputy United States Marshall Anderson as he was being taken to jail. As yet Happington has not been apprehended.

BOSTON WHOLESALE MARKETS.

[To make the following quotations of value to buyer and seller airke, it will be necessary to carefully note the prefatory remarks which precede all articles quoted. In a market of this character it is impossible to give prices for every day of the week, but noting the general tendency of trade, those given will be found sufficiently close to enable dealers to base their transactions thereon.]

The general market continues quite fea turcless. With the new tariff law, a very general improvement in business is looked forward to, and the disposition at present, seems to be to indulge in a little more trading. A steady tone prevails in the fish trade aithough it is quiet. There is a marked improvement in the catch of mackerel. George's Bank cod is firmer. There is a quiet tone to the market. Spot corn is scarce with slow sales and rather lower prices. Oats are quiet with a rather plentiful supply of new goods. There is a steady trade in mill feed at steady prices. Prices for butter hold firm and the demand is steady. Cheese continues quiet and market active. Eggs sell fairly well with good prices. There is a noticed

improvement in poultry with a good supply. The potato trade is steady. Sweet ones are more plenty and quoted somewhat lower. Hay is firm for choice and low goods dull. entering Korea. The merchant steamships. There is a dull tone to rve straw. Cured provisions are firm, especially pork and lard. Refined sugar is firm and prices unchanged.

MAKING THE COOLING COMPOUND BY MACHINERY.

Things That Are Mixed Up for it and How They Are Treated-Ice Cream

CE CREAM is manufactured from a combination of milk, pure cream and gelatine, flavored with different extracts, such as vanilla, emon, strawberry, etc., the ingredients being first mixed up together and placed in circular metal vessels or runners which fevolve around inside of circular wooden tubs, the runners being surrounded by a quantity of cracked ice and rock salt. Each runner is furnished with a beater having a number of blades which revolve around on the inside. beating up the material, the ice and rock salt causing it to thicken and form itself into ice cream. Some manufacturers use eggs, corn starch,

freezing. The first process is the mixing together of the ingredients. About ten quarts of pure cream, ten quarts of milk and about eight pounds of granulated sugar are first mixed together. If the ice cream is to be flavored with strawberry, about six to eight drops of pure red coloring and one-quarter pint of essence of strawberry are added. A quantity of gelatine dissolved in about a quart of warm water is then added to this, bringing the solution up to about twenty-four quarts in bulk. It is then run through a strainer or fine sieve into the runner.

etc., and boil the ingredients before

The runners are made of copper, the inside of which is costed with tin. which, after about four weeks constant running, has to be renewed, the coating of tin being worn off by the working of the beater. The runners are about twenty-three inches in height and about one foot in diameter, and hold about forty quarts. The wooden tubs in which they revolve are two feet four inches in height and are about twenty inches in diameter on the inside, leaving a space of about four inches for the ice around the runner.

Attached to the top of the cover of the runner and perpendicular shaft of the bester, which revolves in a socket at the top of the grinding machine, are two gearing wheels, which are geared to another attached to the shafting of the machine. When the machine is in motion the beater, containing ten 1) inch iron blades, and the runner revolve around in different directions, boxes, hf. \$1.50@2.50; lemons making about fifty-five revolutions per minute. As soon as the machine is set in motion, a small quantity of ice and rock salt is added, which is renewed every few moments until the tub is filled, taking in all about twenty-five pounds of ice. The besting operation takes about twelve minutes. the salt and ice gradually freezing the twenty-four quarts solution, while the gelatine swells or raises the material

up to forty quarts. The grinding operation is completed when the ice cream shows or adheres to the glass windows in the cover of the runner. The wooden tub with the runner of cream is then rolled to one side and another is put in its place to pass through the same operation. The ice cream is then taken from the runners and put into cans ranging from one to ten gallons each and packed into ice and rock ralt for delivery, which is ready in about two or three

hours' time. The machine for breaking up ice consists of a revolving cylinder fourteen inches in diameter and twenty inches in length, riveted to which are nine conical-shaped wrought iron teeth about five inches in length. which, when the machine is in motion. pass between a number of other teeth connected to the framework of the machine. The cakes of ice, which weigh about fifty pounds each, are first broken into two pieces and placed in the machine. The teeth of the revolving cylinder, which makes about 120 revolutions per minute, crash through the ice, breaking it up into small pieces at the rate of a ton in

every twenty minutes. Ice cream bricks are made by pack ng the cream into metal forms. These forms have a top and bottom cover. The ice cream is first put into these brick shaped forms and a strip of paper placed between the cream and each cover, which holds them firmly in place, and then they are packed away in salt and ice and frozen for about three hours. They are then taken out and the forms dipped into a pail of warm water, which losens the cream from the sides. The top and bottom covers, after being wiped with a cloth. are then taken off, the attendant allowing the loosened brick of cream to slip out of the form on to a strip of white paper immediately covering it, and placing it into a pasteboard box

and packed in ice again for delivery. Neapolitan bricks of ice cream are made by placing one layer of cream over another, such as vanilla, chocolate, strawberry, etc. A great many metal forms are made of composition of lead and zine, representing animals, fruits, vegetichies, etc., the ice cream being packed into the forms and frozen in the same manner as the bricks. Forty-quart cans of milk cost wholesale about \$1.12 per can, pure cream about seventeen cents per quart, and ice about \$3 per ton. Two machines, with three runners, can turn out from 1500 to 2000 quarts of ice cream per day. - New York News

The Chinese Government levies a regular tax on beggars, and give them, in return, the privilege of begging in a certain district.

The coldest place in the world is Yakutch, Russia; the thermometer sometimes falls to seventy-three degrees below zero.
